***Reasons For Allowance***

1. The following is an examiner's statement of reasons for allowance: Eleftheriadis et al. (U.S. Patent No. 6,079,566) teach a system and method for processing object-based audiovisual information which is capable of flexibly encoding, storing and accessing a variety of data objects. Audiovisual objects, illustratively prepared in MPEG-4 format, are stored onto physical media using file consisting of segments and access layer primary data units (PDUs), which are accessed using index information. The processes of encoding, storing and accessing audiovisual information are decoupled from monolithic storage in a strict linear order, and reordering and other editorial manipulations are possible (Abstract). Manor (U.S. Patent Application Publication No. 2002/0097798) teaches a system for processing a plurality of packets that include one or more of video, voice, and data information using a plain-old-telephone system. The system including, for example, code that receives one or more packets from a source of packets, code that decodes the one or more packets when the one or more packet are encoded by the source, code that decompresses the one or more packets into a stream of bits when the one or more packets are compressed by the source, code that monitors at least one of a plurality of quality of service measurements associated with transmission of the one or more packets, and code that sends the source of the one of more packets the at least one of a plurality of quality of service measurements, wherein the source can vary an amount of information transferred by the one or more packets based on the at least one of a plurality of quality of service measurements; and at least one processor that executes said code (Summary of Invention). However, prior art of record fails to teach, or render obvious, alone or in combination, a method for integrating

audiovisual encoded information into a predefined frame-structured transmission standard and a corresponding transmission and receiving terminals wherein at least one multiplexed frame-structured data channel of a transmission standard is decomposed up into individual audiovisual data streams, capabilities with other terminals as to types of data capable of being one of encoded and decoded are exchanged after a connection is established, and in accordance with data structures, signaling specifications on the data type used as directly claimed in all independent claims.

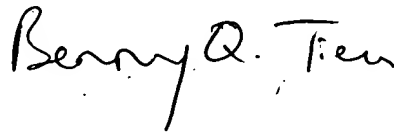

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
